---

GitHub Finder Project — *HTML, CSS, BootStrap, JavaScript, API*
- This is a search app that uses the GitHub API to get user information when a valid username is input. It displays the avatar, username, followers count, repository count, top 5 repositories based on forks and stars. APIs allow you to use the real world data that drives platforms like GitHub. You can communicate with the remote servers and get data that you can use to build an app.
